

Annotated PDF Feedback Assignment Grading Option

Just a note to those of you who provide in-depth feedback to student file submissions that the "Annotated PDF" option is now visible in the Moodle Assignment Grader interface. This will load a copy of student submitted PDF files (to use this feature, student files must be submitted as PDF documents) and allow you to make inline comments on the file directly in Moodle. By default, the Annotated PDF feedback interface appears on the left side of the Assignment Grader, while the Grade, Text Feedback, and File Feedback options load on the right.

If you don't use this feature: You can use the Grader View setting at the bottom right corner of the Moodle assignment grader interface to view just the traditional grader interface by selecting the left view from the three options. The middle button displays both PDF Annotate and traditional grader interface, and the right button displays only the PDF Annotation interface. Please the screen shot below showing how to access these three View options.
